Figure 2

The reaction scheme illustrates the synthesis of poly(2,2,5-trimethyl-6-oxo-1,3-dioxane-5-carboxylic acid) (PMDA) from 2,2,5-trimethyl-6-oxo-1,3-dioxane-5-carboxylic acid (PMDA) and 4,4'-oxydianiline (ODA). The reaction involves the formation of an amic acid intermediate followed by cyclization to the polyimide structure.
